DEWALT

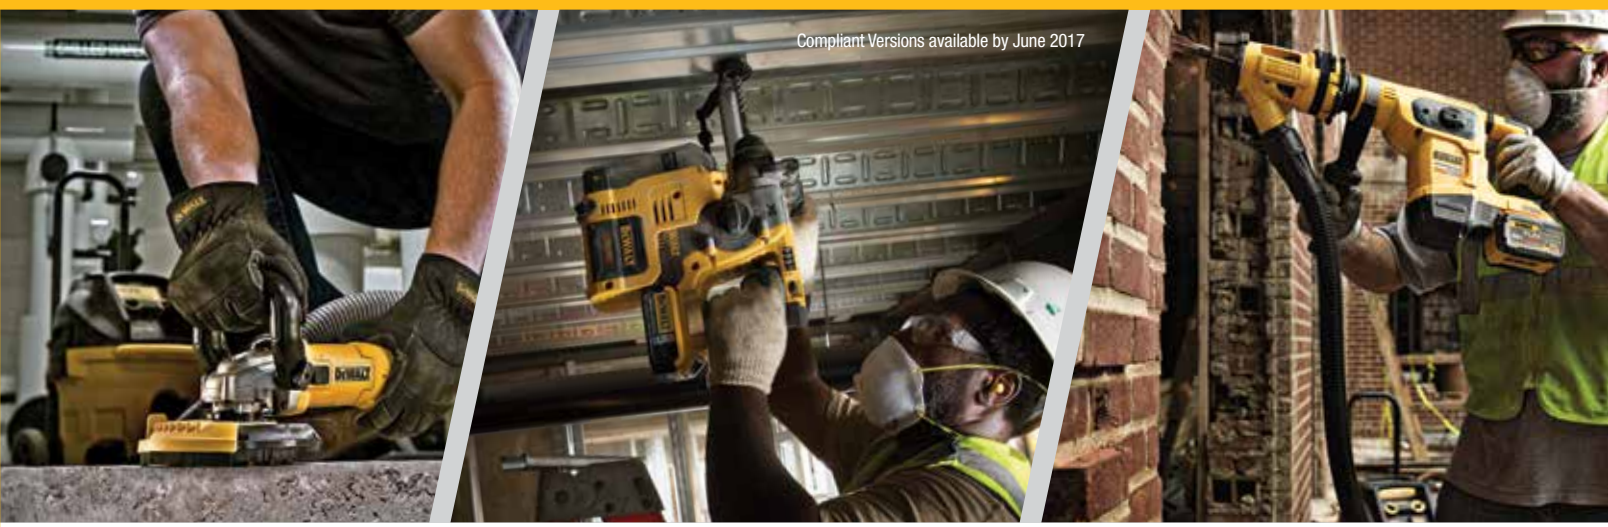
OSHA COMPLIANT 1926.1153 DUST SOLUTIONS



ARE YOU COMPLIANT?

The Occupational Safety and Health Administration (OSHA) has issued a final rule to curb lung cancer, silicosis, chronic obstructive pulmonary disease and kidney disease in America's workers by limiting their exposure to respirable crystalline silica. This rule requires engineering controls to keep workers from breathing silica dust.

TOOLS

Operate and maintain tool in accordance with manufacturer's instructions to minimize dust emissions.

- Read operator's manual provided with tool and accessories.
- To minimize dust emissions use recommended shroud or cowling and dust extractor

ACCESSORIES AND SHROUDS

Use drill or grinder equipped with commercially available shroud or cowling with dust collection system.

- All DEWALT shrouds and dust collection systems are commercially available.

DUST EXTRACTORS

Dust collector must provide the air flow recommended by the tool manufacturer, or greater, and have a filter with 99% or greater efficiency. Dust collector must have a cyclonic pre-separator or filter-cleaning mechanism. Cleaning/Drilling holes requires a vacuum with a HEPA filter.

- Both DWV010 and DWV012 provide the necessary airflow for drilling and hammering applications.
- Both DWV010 and DWV012 ship with dual HEPA filters, which have an efficiency of 99.97% of all particles greater than or equal to 0.3 microns.
- Both DWV010 and DWV012 have a timed automatic filter-cleaning mechanism.

PERFORM PROTECT™

YOUR FIRST LINE OF DEFENSE.

PERFORM PROTECT™

DEWALT's Perform & Protect™ line of tools is designed to provide a high level of one or more of the following: control, dust containment or low vibration, without sacrificing performance.

DUST

OSHA COMPLIANT 1926.1153

AIR LOCK

- Dust shrouds and dust extractors can decrease the potential of inhaling dust. They can also help increase visibility and reduce cleanup and maintenance costs.
- DEWALT dust systems are compliant through their adherence to OSHA requirements for handheld and stand-mounted drills (including impact and rotary hammer drills).

CONTROL

KICKBACK™ BRAKE

LANYARD™ READY

E-CLUTCH®

- E-Clutch® System helps minimize sudden torque reaction compared to standard clutches.
- Power Loss Reset™ feature prevents accidental re-starts of the tool after a user experiences a power outage such as a tripped breaker or accidental unplugging of the cord when the switch is in the locked-on position.

VIBRATION

SHOCKS™

- SHOCKS-Active Vibration Control® System reduces vibration at the handles compared to hammers without such systems.

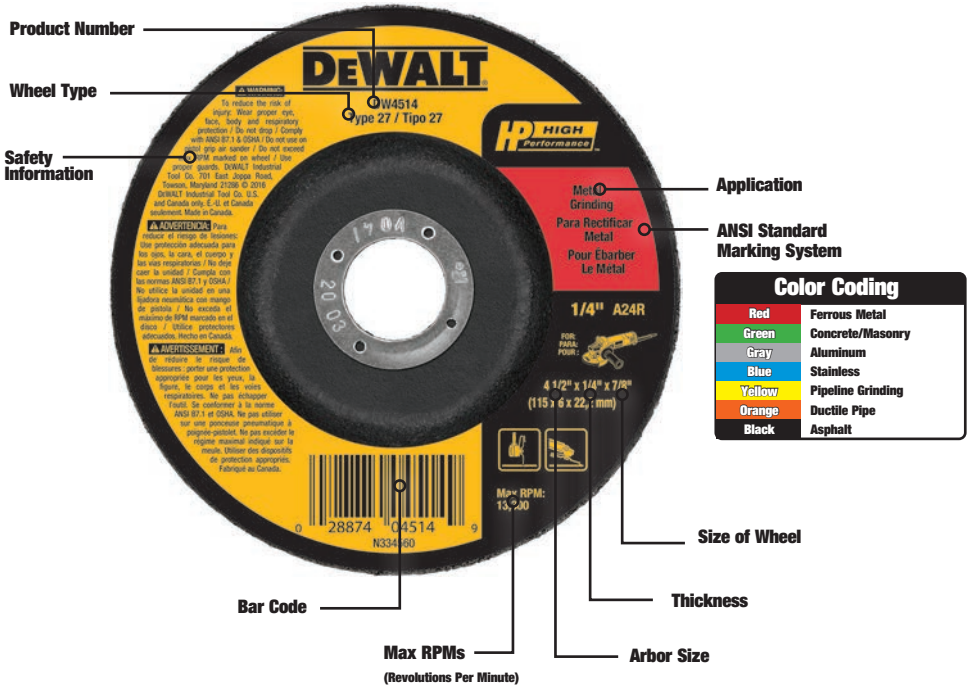
DEWALT ABRASIVE PRODUCT IDENTIFICATION

DEWALT utilizes an industry recognized color coding and identification system to help users identify the right bonded abrasive wheel for their application. There are also several other key identifiers to look for on a wheel; s, wheel size, thickness, and arbor size to ensure the correct product is used.



Color Coding

Red	Ferrous Metal
Green	Concrete/Masonry
Gray	Aluminum
Blue	Stainless
Yellow	Pipeline Grinding
Orange	Ductile Pipe
Black	Asphalt

American National Standards Institute (ANSI)

A

Primary grain used to make the wheel

A - Aluminum Oxide
TA - Treated Aluminum Oxide
C - Silicon Carbide
Z - Aluminum Zirconia
SG - Ceramic

24

Size of the abrasive grain

Coarse	Medium	Fine	Very Fine
16	30	100	220
20	36	120	240
24	46	180	280

BF

Type of bond used

B - Resinoid
BF - Resinoid Reinforced
RF - Rubber Reinforced
S - Silicate
V - Vitrified

TYPES OF ABRASIVE GRAINS

-A-
ALUMNINUM OXIDE

Tough, durable grain used for cutting, grinding, and finishing of metal in bonded abrasives- and metal, wood, and coatings in coated abrasives.

-TA-
TREATED ALUMNINUM OXIDE

Aluminum oxide grain with a coating that increases bond strength for harder, longer lasting bonded abrasives.

-Z-
ZIRCONIA

Tough, durable grain with fine crystal structure used for rugged stock removal of metal in bonded abrasives, and metal, and wood in coated abrasives.

-C-
SILICON CARBIDE

Very hard and brittle grain used on concrete and very soft or very hard metals in bonded abrasives. For very fine finishing of metal and coatings in coated abrasives.

CERAMIC

Tough, durable grain with very fine crystal structure to create many more cutting edges in each grain. Used for the highest stock removal of metal in bonded and coated abrasives.

DIAMOND

Very hard and durable grain for use in cutting and grinding concrete and metal.
